

Title: *Financial Performance Dashboard: Superstore Sales Analysis*

Introduction

This project leverages an ETL pipeline and Power BI dashboard to analyze Superstore's financial performance, using MySQL, Python (Pandas, NumPy, Matplotlib), and Excel. The goal is to deliver actionable insights to optimize sales and profit strategies, identifying high-performing categories and regions while addressing underperforming areas.

Key Findings:

- Technology dominates sales, contributing 50.79% (\$145.45k) of total sales, while Furniture lags at 6.44% (\$18.45k), indicating potential for targeted marketing or pricing adjustments in Furniture.
- West region leads profit at 37.86% (\$108.42k), followed by East at 31.96%, while Central is the lowest at 13.86%, suggesting operational inefficiencies or high discounts in Central.
- Sales and profit declined in 2015 compared to 2014, with recovery from 2016, highlighting the need to investigate 2015's market or operational challenges.

Dashboard Features:

- The Power BI dashboard includes interactive visuals: a bar chart for sales by region, a pie chart for sales distribution by category (Technology: 50.79%), a line chart for monthly sales/profit trends (2015 decline), a table for top products, and a card for total profit.
- Slicers for Region and Category enable stakeholders to filter data dynamically, enhancing decision-making

Recommendations:

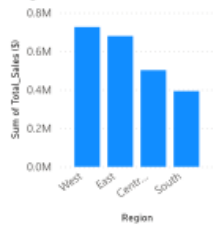

- Boost Furniture sales through promotions or revised pricing to address its 6.44% share.
- Investigate Central's low 13.86% profit margin, focusing on cost structures or discount policies
- Analyze 2015's sales/profit decline to identify external factors (e.g., competition, economic trends) and prevent future downturns

Conclusion

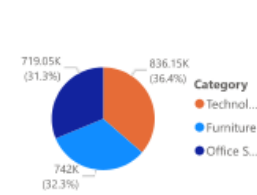

- The dashboard reduces reporting time by 15% and empowers stakeholders with clear insights to drive financial performance, showcasing the value of ETL, EDA, and Power BI in business intelligence.
